To Whom It May Concern,

Just as cable TV is able to provide viewers with a variety of shows, some of which I believe are not suitable for all audiences, shouldn't paying customers of satellite radio be able to listen to a wide variety of shows including instant traffic & weather? Some home areas have very poor radio reception, and traveling by car does not always provide the best reception either. The market is big enough and can support satellite radio and free radio. Please reject the NAB's petition 04-160. Thank you.
